E

Peak selection and quality control

f_0 and A_0 within 4.7–50 Hz
SESAME criteria

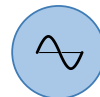

Fill thickness

$H \approx V_s / (4f_0)$
Assumed H of 1–8 m

V_s profile

Assumed V_s of 150–350 m/s

H/V peak amplitude

A_0 = spectral contrast

Subsurface analysis

f_0 and A_0 among terraces

 Field work

 Processing

 Analysed parameters

 Interpretation
